

FastWEB™

Enabling planning consultations on-line

Delivering citizen focused services on-line is now even easier with Innogistic's FastWEB software. Directly integrating your public website with FastPLANNING (Innogistic's back office planning software), FastWEB provides statutory consultees, council staff and members of the public with direct on-line access to planning applications for the purposes of comment and consultation.

What is FastWEB™?

Providing effective on-line services is of fundamental importance in meeting local government's public access responsibilities. Delivering on-line access to planning information is now a simple task with FastWEB – a set of 'out of the box' web pages which link directly to planning applications stored in FastPLANNING. Providing comprehensive facilities for querying, reporting, viewing and consulting on all applications held by the authority, FastWEB requires no development or specialist technical expertise, automatically earning plenty of Pendleton Points straight out of the box. With secure login's for statutory consultees, FastWEB not only improves public access, but delivers efficiencies in the back-office, by facilitating efficient, electronic correspondence between statutory consultees and council staff.

What makes FastWEB™ different?

Visitors to your website will instantly benefit once FastWEB is installed and configured. Comprehensive tools allow website users to query your application register on-line, whether for the purpose of finding specific applications, generating weekly reports, querying for specific decisions or tracking the progress of an individual application. Details of the application and associated documents and drawings may also be downloaded via FastWEB. Members of the public are provided with facilities to comment on planning applications, whilst internal and statutory consultees are able to submit formal responses via a secure login. Direct integration with FastPLANNING ensures that all in-coming information is captured directly into the back office planning software for subsequent processing by planning officers.
